In addition, the medical treatment income for severe case (high-cost care, Adj.RW  $\geq 2$ ), particularly revenue from gastric surgeries, declined compared to the same period last year, representing another key factor contributing to the decrease in revenue from the Social Security scheme for this quarter.

costs, physician fees, and the management of medical staff schedules to align with actual patient volumes, as well as other expenses related to patient care. However, despite the cost reduction, the gross profit margin did not improve, as overall revenue remained below the level recorded in the same period last year.
